

HOW TO USE THIRD PARTY DATA?

DEVELOP A COMPETITIVE ADVANTAGE by aggregating data created outside your organization. Combine third-party data to **CREATE NEW PRODUCTS, SERVICES, AND INSIGHTS**. Build a 360-degree view of your environment and monitor competition or partners' supply chain and pricing strategy, collect leads or verify a provider's credentials.

Inconsistencies between your needs and available data

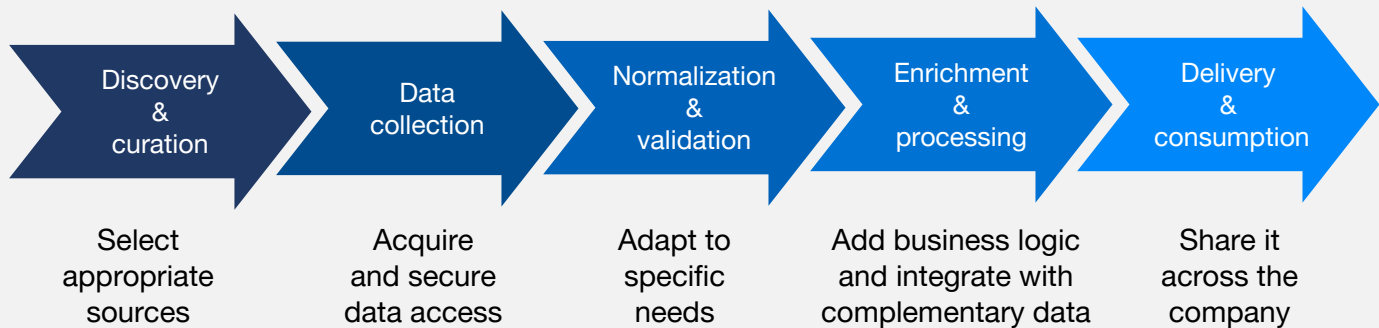

RIGHT DATA: Irregular data quality, unknown data generation process, no control on the fields available or their granularity.

RIGHT FORMAT: Poor data standards with a variety of formats to be integrated

RIGHT TIME: Unknown update frequency, unexpected downtime or format change complicate real-time usage.

RIGHT PLACE: Data are scattered across multiples sources (partners, vendors or open data portal and public registries).

While each implementation is unique, all data acquisition systems share similar **FUNCTIONS**

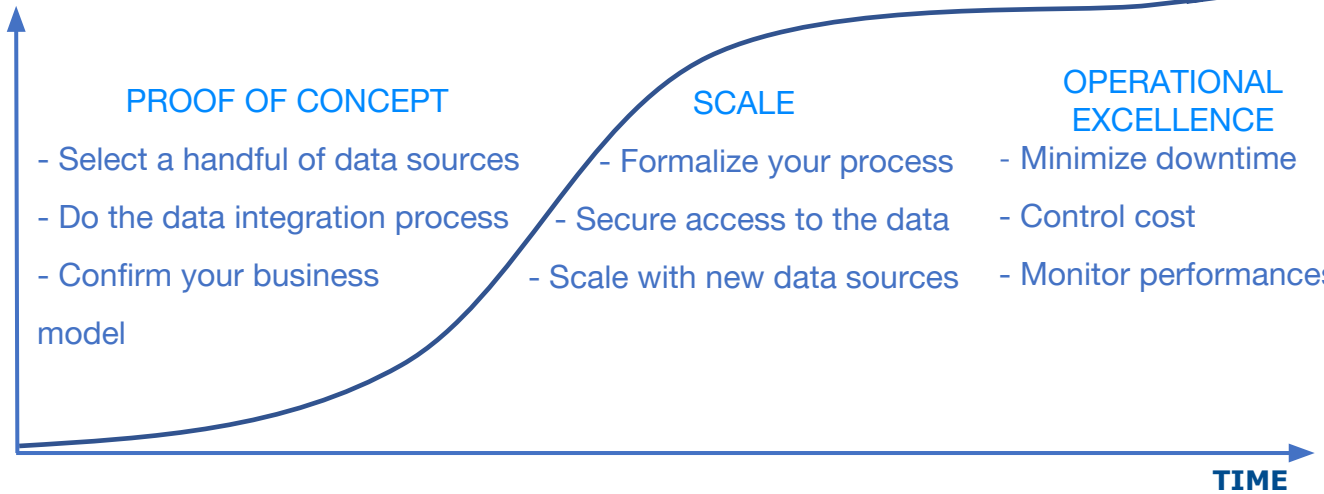

Process management:
Script Configuration, Orchestration, Monitoring, Reporting

Infrastructure Management:
Server, Logs

Manage uncertainty and unexpected roadblocks by **STARTING SMALL** and assess what needs to be done before **SCALING YOUR SYSTEM**

Build your process in steps

VOLUME OF DATA
